

Lamperd Less Lethal

The premier solutions provider for a less than lethal world

Lamperd Less Lethal Inc. answers the needs of the Tactical Law Enforcement Community with the development of a hand crafted high quality reusable Distraction Device. The LLLI Model Thor.

Our LLLI Model: The Thor distraction device body is made of the finest gun steel providing the end user with an unlimited number of reloads, a bottom radius and 6 exhaust ports to prevent rocketing of the device body.

We feature a state of the art steel fuse body; a first in Flash Bang technology. This is the first update to the M201 type fuse with no possibility of fragmentation, thereby reducing the risk of injury and protecting operators from civil liability. The pull ring can be outfitted with an optional safety clip.

The performance is in keeping with approved tactical guidelines of an audio output of 175 db, 6-8 million candela and a delay of between .5 and 1.5 seconds based on your operational needs. Multi sub munitions available upon request. Blue reduced output training rounds also available.

The Model Thor Distraction Device body also features a threaded bottom to be used with a number of accessories supplied by Lamperd Less Lethal- trip wire, perimeter security and remote ignition. Web gear and carriers are also available.

Training available:

Thor Distraction Device Operator

Thor Distraction Device Instructor

Thor Distraction Device Armourer

LAMPERD LESS LETHAL...the right stuff for keeping the situation under control.
