Mr. Ed Bogats Jr.

EJC Security Services & Lamperd Less Lethal

Mr. Bogats

I'm writing this letter to you to let you know that the Municipal Enforcement Unit is very interested in the new Pepper Splatter Devices. We will be conducting a trial study with the new device and looking at use and deployment with my road officers.

This unit looks to be safer and better for use in the fact that we can use the device continually if deployed giving an officer more chances to protect himself and to use less lethal force. The device is simple to operate and accurate which is a plus since as we know officers deploying OC in any situation are under great stress as a situation develops.

I will be talking to other agencies I have trained in the past as well as other agencies I work with about use and possible deployment of this device.

I also look forward to working with you to develop a Canadian Version of the training modules that you have developed.

I have placed an order for devices and carriers for the devices with Lamperd Less Lethal and look forward to testing and evaluation of this new device. We at the Municipal Enforcement Unit Look forward to being the first Law Enforcement Agency in Canada to use and deploy this device.

Please feel free to contact me with any questions and or helpful suggestions as we at the MEU work through the roll out of this device. As you are aware we have been using Lamperd Less Lethal & FOX for many other devices and have had very good results with the use of their products and training.

William HC Menzie

Chief of Operations
